

Murilo Pereira Barreiro

BI & Data Analyst | SQL • Python • Dimensional Modeling • ETL/ELT • Power BI

São Paulo, Brazil · murilobarreiro7@gmail.com · linkedin.com/in/murilo-barreiro · github.com/Murilo-Barreiro

SUMMARY

BI/Data Analyst focused on the financial market, working at the intersection of data engineering and business areas. I structure analytical datasets from multiple sources (APIs, relational databases, files), develop dimensional modeling (Star Schema) and automate ETL/ELT pipelines and management reports with Airflow and Pentaho. Experienced in consolidating data from a brokerage and an asset manager — investment funds, receivables funds (FIDCs) and controllership — delivering reliable indicators for decision-making.

PROFESSIONAL EXPERIENCE

Mid-level BI Analyst — Nova Futura Corretora de Investimentos 02/2025 – Present

- › Structured and consolidated analytical datasets from multiple sources (APIs, relational databases and external files), standardizing business rules and naming conventions for analytical consumption.
- › Modeled dimensional data marts (Star Schema) that support recurring dashboards and analyses of financial and operational performance.
- › Implemented ETL/ELT pipelines orchestrated with Airflow and Pentaho (PDI), ensuring governance, stability and automatic data refresh.
- › Automated management report updates, reducing manual work and the closing time by [quantify: e.g. ~70%].
- › Optimized critical SQL queries, improving processing time and the reliability of analyses.

Data Intern / Jr. Data Analyst — Carmel Capital 07/2023 – 02/2025

- › Developed dynamic, automated reports for financial analysis and asset performance tracking, integrating data via SQL, Python and Excel (VBA/Macros).
- › Built and maintained monitoring indicators for investment funds (FIDCs), supporting monthly reports addressed to [quantify: e.g. X investors].
- › Supported daily controllership, ensuring compliance with fund regulations and asset allocation rules.
- › Structured and organized the internal database, increasing the consistency and reliability of information.

PROJECTS

Analytical Data Mart in Star Schema [diagram] [documentation]

- › Complete modeling with definition of facts, dimensions, surrogate keys and granularity; ETL pipelines for loading and refresh; logical model, data dictionary and load flow fully documented.

AI Meeting Minutes [repository]

- › Fully Python-based solution (modular, with logging): audio transcription with Whisper, speaker diarization with Pyannote and minutes/summary generation via GPT and Gemini.

2D Packing Simulator — Capstone Project [repository]

- › Computational solution in Python (rectpack + Streamlit) applying modularization and good code-maintenance practices.

TECHNICAL SKILLS

Programming & Analysis: SQL (CTEs, window functions, optimization) • Python (automation and data manipulation) • Power BI (DAX, Power Query) • Advanced Excel (VBA/Macros)

Modeling: Dimensional Modeling • Star Schema • Granularity • Data dictionary • Data marts

Data Engineering: ETL/ELT • Airflow • Pentaho (PDI) • APIs (FastAPI) • Docker • Git

Databases: SQL Server • Oracle • PostgreSQL

Languages: Portuguese (native) • English (advanced)

EDUCATION

Production Engineering — Instituto Mauá de Tecnologia Graduation: 12/2025
